Main features

- **Support of analog cameras**
 - Progressive or interlaced scanning
 - Synchronous timing or asynchronous reset and shutter control
 - Monochrome single-tap, dual-tap or RGB
 - Up to quad-speed
 - High-resolution, support for mega-pixel cameras
- **A/D converters** 8-bit 32MHz - Domino Iota and Alpha 2 -
10-bit 40/65MHz - Domino Melody, Harmony, Symphony -
- 8- or 10-bit input LUTs and programmable input filter
- **On-board memory**
- **Trigger, strobe, enhanced I/O lines**
- **Internal connectors: video, system and power**
- **MultiCam drivers for Microsoft Windows® and Linux**

DOMINO Melody™, DOMINO Harmony™ and DOMINO Symphony™

- **D³ Technology™***
 - Fully digital signal processing chain
 - Black level restoration
 - Sampling clock generation
 - Gain, offset control
 - Color sub-carrier removal
 - Control over horizontal and vertical pixel counts
 - Synchronization recovery: vertical and horizontal
 - Low-pass filtering
 - Extremely low synchronization jitter
 - Absolute digital stability and consequently no need of pixel clock
 - Absolute parametric stability
 - Various camera synchronization mode supported
 - Excellent performance reproducibility

The Domino series is a range of high-end **PCI** and **PCI Express** frame grabbers for **analog** cameras. They support any system function associated to industrial acquisition, such as camera asynchronous reset, exposure and strobe control. The latest Domino boards - **Melody, Harmony and Symphony** - are based on an innovative proprietary technology called **D³ Technology™***. It provides a **perfect digital image** with the benefits of a proven analog environment: low-cost, reliable cabling and connections, smallest cameras, low power, ... The D³ Technology* offers unequalled signal stability and image quality to the analog acquisition. These boards are further enhanced by extensive on-board I/O capabilities.

Bus mastering

All Euresys frame grabbers are **PCI bus mastering** agents that directly store the acquired images into the PC physical memory without CPU involvement. As a **unique feature**, a Euresys board automatically recovers the **scatter-gather** virtual memory mapping to present the data as a regular bitmap image in a user allocated memory buffer.

Interfaced cameras

The Domino series and the MultiCam drivers interface an impressive choice of different analog cameras.

► An up-to-date list is available on the web site www.euresys.com

The Domino Melody, Harmony and Symphony support top-notch cameras such as dual, triple and quad-speed. As a unique feature, they have strictly no jumpers. Even the 75-ohm termination resistor is a software selectable feature.

Trigger, strobe, enhanced I/O lines

In order to facilitate the integration of the board into the application system, the new Domino boards offer digital I/O lines configurable for trigger input, strobe output or general purpose control.

DOMINO Melody™

- One single-tap camera**
- One 10-bit 40 MHz A/D converter**
- One 8- or 10-bit LUT**
- 16-Mbyte on-board memory**
- Form factor: Conventional PCI**
- 32-bit, 33 MHz, 3V or 5V signaling**
- Standard and low profile**

The Domino Melody is an ideal solution for single-camera applications inspecting fast moving objects.

- Camera support**
- Video and power connectors:**
- One HD15 video connector on the bracket
 - One internal 10-pin header video connector
 - One Molex 4-pin connector for camera power supply

Trigger, strobe, enhanced I/O lines

- One **opto-isolated output line** for safe control of external equipment
- One **differential LVDS input line** for high-speed, robust and flexible control from external equipment
- Two **digital TTL I/O lines** for general purpose control

- System connectors:**
- One **RJ45 system connector on the bracket**
 - One **internal 10-pin header**

System connector RJ45

Form factors

The Domino Melody has a small PCB size corresponding to the Low Profile form factor. It is delivered with two brackets, allowing to install the board in either a low profile small standard PC or in a conventional larger PC. The Low Profile computers are smaller than standard PCs saving space which is so important for industrial applications.

DOMINO Harmony™

- One RGB or two monochrome cameras**
- 10-bit 40 MHz A/D converters**
- 32-Mbyte on-board memory**
- Two DMA channels**
- Form factor: Conventional PCI**
- 64-bit, 66 MHz, 3V or 5V signaling**

The Domino Harmony is an analog frame grabber for on-the-fly acquisition with two industrial monochromes and one RGB analog camera.

- Camera support**
- One or two area-scan single-tap cameras
 - One RGB analog camera

- Video and power connectors:**
- Two HD15 video connectors on the bracket
 - One internal 10-pin header video connector
 - One Molex 4-pin connector for camera power supply

Trigger, strobe, enhanced I/O lines

- Two **opto-isolated output lines** for safe control of external strobe light equipment
- Two **differential LVDS input lines** for high-speed, robust and flexible control from external equipment
- Four **digital TTL I/O lines** for general purpose control

- System connectors:**
- One **HD15 system connector on the bracket**
 - One **internal 10-pin header system connector**

System connector HD15M

DOMINO Symphony™ NEW

- Four single-tap cameras**
- 10-bit 65 MHz A/D converters**
- 64-Mbyte on-board memory**
- Four DMA channels**
- Form factor: Conventional PCI**
- Form factor: PCI Express**
- Four 8- or 10-bit LUTs**
- 64-bit, 66 MHz, 3V or 5V signaling**
- Full-height, half-length, x1**

The Domino Symphony and Domino Symphony PCIe are high-speed analog frame grabbers. They provide affordable image acquisition for applications with multiple monochrome cameras.

Camera support

- Four single-tap cameras including high-speed high-resolution cameras
- Performance: sustained 30 fps acquisition of 8-bit 1.2 Megapixels images on 4 channels concurrently!

Video and power connectors:

- One HD44 video connectors on the bracket
- One internal 10-pin header video connector
- One Molex 4-pin connector for camera power supply

Rich set of I/O lines

Connector name	Type of connector	I/O lines
System IO connectors	<i>On the bracket:</i> One HD26 system connector	- 4 opto-isolated output lines for safe control of external equipment
	<i>Internally:</i> One 26-pin header	- 4 differential LVDS input lines for high-speed, robust and flexible control from external equipment - 4 digital TTL I/O lines for general purpose control
Factory IO connector	<i>Internally:</i> One 34-pin header	- 4 contact-closure inputs - 12 solid-state outputs
Camera COM connector <i>Exposed to the OS as standard COM ports</i>	<i>Internally:</i> One 16-pin header	- 4 RS232 asynchronous serial communication lines to control the cameras

Form Factors

The Domino Symphony is available in two versions:

- **Domino Symphony™**: conventional PCI 64-bit 66-MHz PCI-X compatible
- **Domino Symphony PCIe™**: 1-lane PCI Express

Software support

MultiCam™

*MultiCam for Microsoft Windows 2000®, XP®, Server 2003® and Vista®
MultiCam for Suse Linux Enterprise Server 10
C, C++, .NET classes and ActiveX controls*

The **MultiCam driver** enables the consistent control of several Euresys frame grabbers, using an arbitrary number of cameras, from **one or several software applications**. MultiCam allows defining **channels** linking cameras to buffers in the PC memory.

The MultiCam channel **identifies all parameters** ruling the acquisition process from a camera. Every camera feature, such as its type, resolution or image format, is described and controlled through **simple parameters**, considerably easing the camera control task. For each channel-controlled camera, a set of dedicated parameters is created from a CAM file.

Euresys delivers pre-defined files for many popular cameras; still the user can customize his **CAM files**.

► An up-to-date list is available on the *Interfacing Cameras* page on www.euresys.com.
